

ASUS selects Wacom feel IT technologies for its Eee Note EA800, the latest note-taking device

Tokyo, Japan, – December 6, 2010 – Wacom® feel™ IT technologies has been selected as the key technology for ASUS's new digital notepad Eee Note EA800. The EA800's sleek design and small footprint makes it an ideal choice for those seeking a mobile computing device. Students as well as on-the-go home and office users will appreciate the mobile characteristics and intuitive workflow of the EA800.

With Wacom feel IT technologies, EA800 offers natural and precise hand-writing capability as well as navigation features built into its own note-taking application. EA800 also offers full E-book support and Internet capabilities. When the need to annotate, draw, sketch or navigate smaller targets arises, users can employ the battery-free and cordless Wacom pen to enhance workflow.

"The collaboration between ASUS and Wacom achieved a unique electronic device that is more natural and robust to use," said Hidetoshi Kamoto, Division General Manager of Wacom's Component Business Division. "We are pleased to work with ASUS, a company that shares our vision of bringing people and technology closer together."

The EA800's pen input is more practical than the keyboard for many types of applications. Pen input is more convenient for mobile users who like to jot notes or sketch ideas while on-the-go. For example, students taking mathematics, sciences or foreign languages who need flexible hand writing input will find the EA800 to be an indispensable companion. "Office and home users can also benefit from the EA800 pen for note taking," continued Kamoto. "And E-book readers will appreciate the ability to annotate directly on the text."

About Wacom feel IT technologies

Wacom feel IT technologies is the brand that provides the user interface technology of Wacom. By integrating UI technologies such as a multi-touch sensor, pen sensor, controller and device driver in the most sophisticated way, the brand provides a highly natural and intuitive user interface experience for PCs, e-books and other IT devices.
